

## Mute Switch for Model 10A Metronomes

The Model 10A metronomes have a jack on the front panel that was intended for routing the Model 10A to an external amplifier. If you are not using it for that purpose, then the jack can function as a remote mute for the internal speaker.

### Fender Footswitch

Fender makes a nice, inexpensive one-button on/off footswitch, part number 0994049000 that is exactly what you need. On its box it is marked Footswitch 1 BTN On/Off FM/BLSJR 1/4".

It is sold at tons of music stores. Just Google for the part number and/or description above and you should find several sources for the switch.

Simply plug the Fender footswitch into the front panel jack of a Model 10A and it will act as a mute switch.
